There is still much much more to explore with Krita, I briefly used it as you cansee in the photos above. Uploading the image into Krita you can select the image layer and paint inside the lines immediately. It is able to detect lines and determine to a certain pixel level where the colors should go, example on the left. The images on the right side is just operating as a normal application such as photoshop, illustrator, etc. More tutorials need to be reviewed as well as the exploration of the software.

Since last week, week 7, the main focus was to learn on how AI can continue to assist during the coloring/shading phase of comic creation. So far the process is minimal of what AI is helping with as of rightnow but will be updated more as this week goes on. Progress will be updated.
